## WAM Active Limited

### VIEWPOINT & RATING

The Company was the third in a stable of listed investment companies (LICs) managed by Wilson Asset Management (Wilson AM), listing in 2008. The Company provides investors with a well managed exposure to Australian equities. Zenith regards Wilson AM as one of the strongest LIC managers in the market given its strong heritage, impressive performance track record and experienced investment personnel, however, our conviction in the Company is moderated due to its size and illiquidity.

Wilson AM was founded in 1997 by Geoff Wilson, who owns 100% of the business. Wilson AM managed more than \$2 billion (as at 30 April 2017) across five investment strategies offered through LICs. Zenith believes Wilson AM is one of the prominent players in the LIC segment of the market. In addition, we believe Wilson AM's ongoing commitment to investor communication is a key factor behind the success of their strategies.

The Company is managed by Geoff Wilson and Chris Stott, who are supported by a team of five. Zenith rates the team highly and is pleased to see team depth increasing over time, reducing the historically high level of key person risk within the organisation.

Wilson AM's approach is absolute return orientated and seeks to take advantage of relative short-term arbitrages and mispricings in the market including: participating in IPOs, placements, block trades, rights issues, takeovers, LICs trading at discounts to net tangible assets (NTA), earnings momentum surprise and market themes and trends. The portfolio is actively traded and can participate in short selling.

Given Wilson AM's absolute return approach, the Company has the flexibility to invest across the full sector and market capitalisation spectrum. The Company may hold significant levels of cash if opportunities cannot be found, and while there is no restriction on the number of positions held, there will typically be 30 to 90 positions in the portfolio. Consistent with the short-term nature of the strategy, the Company is expected to exhibit portfolio turnover of between 200% p.a. to 400% p.a.

Zenith believes the Company's differentiated approach, which has a successful long-term track record, is a key attraction for investors. In addition, we note that the Company targets a growing, fully franked dividend income stream to shareholders, which may be an appealing feature.

Zenith notes that there is no return hurdle (either market or absolute) for the performance fee. A performance hurdle is normally either a market benchmark (i.e. the All Ordinaries Accumulation Index) or the risk free rate, being cash. Furthermore, most performance fees are calculated off "net" assets so as to remove the management cost before performance fees are paid. Zenith believes that the lack of a performance fee hurdle makes the Company's fee structure highly uncompetitive and is inconsistent with industry best practice.

### COMPANY FACTS

- Benchmark unaware, absolute return style investment strategy
- Typically holds 30 to 90 positions
- High portfolio turnover strategy
- Short selling is permitted

## APPLICATIONS OF INVESTMENT

### SECTOR CHARACTERISTICS

#### Listed Investment Companies (LIC)

In assessing the performance of the LIC sector, it is vital to understand how their structure affects the final performance figures as it is materially different to unlisted funds. As listed companies, the portfolio returns generated are exposed to additional volatility from share price movements and can trade at significant premiums or discounts to Net Tangible Assets (NTA).

In addition, the impact of pre and post-tax returns needs to be considered because LICs distribute returns net of company tax, whilst benchmark index returns are quoted on a pre-tax basis. Accordingly, it is difficult to accurately compare shareholder returns to either benchmarks which do not account for tax or realised peer group LICs where the timing of company tax on realised gains differs.

As an indication however, a series of return data can be viewed on the basis of the returns generated by:

- Share price and dividends
- Change in pre-tax NTA value and dividends
- Returns generated internally by the investment portfolio

For comparison purposes, the use of the internal portfolio returns versus the benchmark gives the closest measure of the investment manager's skill in generating returns. However, these returns may not be able to be fully crystallised to shareholders given the potential for share price movements.

Caution should be used in the comparison of these figures as share price and pre-tax asset NTA are measures which take into account company tax paid on realised capital gains and unfranked income, whereas benchmark performance is a wholly untaxed measure.

At various times when assessed on a purely quantitative basis, a LIC can trade away from its NTA which may represent good buying or selling opportunities. While these instances may boost investment returns, there is no guarantee that the discount or premium will converge to NTA, therefore, gains can not be crystallised.

#### Australian Equities

The sector incorporates both benchmark aware and benchmark unaware strategies but the funds focus predominantly on large capitalisation stocks. The sector is one of the most competitive in the investment landscape, based on the number of managers and strategies available to investors. Despite the competitiveness of the sector, the Australian share market has historically provided many opportunities for active management, with the median active manager outperforming a passive index over the longer term.

The Australian share market, as represented by the S&P/ASX 300 Accumulation Index, is highly concentrated and narrow. Technically, a company is assigned the large cap moniker if it falls within the S&P/ASX 50, with those companies falling between the S&P/ASX 50 and S&P/ASX 100 assigned to the mid cap category. All stocks below the top 100 are considered small capitalisation stocks.

As at 30 April 2017, the Financials and Resources sectors

combined represented a significant portion of the S&P/ASX 300 Accumulation Index, with the Financials sector accounting for approximately 39% of the index, and Materials approximately 15%. The split between Industrials and Resources stocks was approximately 80%/20%. The top 10 stocks represented approximately 47% of the weighting of the Index, and the top 20 stocks represented over 60% of the Index.

In comparison to the S&P/ASX 300 Index, the S&P/ASX Emerging Companies Accumulation Index has a much lower weighting to the Financials sector and is represented by a larger weighting to the Resources sector, which reflects the importance of resources related industries to the micro-cap sector. A significant proportion of these resource companies are classified as "exploration" companies, and in many cases are not cash flow positive, can be highly volatile and their fortune can be linked to whether (or not) a resource body is discovered.

The Small and Micro Cap sector typically have a market capitalisation of less than \$500 million and the sector is comprised of approximately 1,600 listed companies with a combined total value of circa \$110 billion. Over the longer-term, active management in this sector has historically demonstrated an ability to significantly outperform a passive index given it is an "under researched" segment of the market.

### PORTFOLIO APPLICATIONS

In general, compared to most other asset classes, equities offer investors the opportunity for higher capital growth over the longer-term with some income. However, this higher growth is also often associated with higher volatility. Therefore, it is recommended that investors adopt a longer time frame when investing in equities.

Investors should also be cognisant of the fact that the Australian equity market is relatively concentrated, with the Materials and Financials sectors dominating the market; the market also only represents approximately 1% of global equity markets (in terms of market capitalisation). Therefore, to mitigate this concentration risk it is highly recommended that investors diversify their investments across asset classes, both domestically and globally.

The Company may suit investors seeking a liquid (i.e. ASX listed), benchmark unaware, transparent and high yielding exposure to Australian equities. The Company is managed which an absolute return approach which allows for significant levels of cash to be held when investment opportunities are not apparent.

In addition, the Company invests across the market capitalisation, typically having a bias toward small/micro cap stocks as this segment of the market tends to be less efficient and under researched. Given the exposure to small/micro cap stocks, Zenith believes investors should be prepared to invest with an investment time horizon of seven or more years to maximise their potential for optimal results.

The Company may also suit investors seeking a consistent income stream, with the Board committed to paying an increasing stream of fully franked dividends to shareholders. A dividend reinvestment plan also continues to operate at 5% discount.

Despite the relative merit of the strategy, investors should give consideration to the method of access. While the unlisted fund structure may be less convenient for some investors, accessing a strategy via a LIC will mean that the effectiveness of the strategy may be significantly diminished due to the Company's own trading movements. That is, investors may not be able to benefit from the portfolio's performance, as the performance of the Company is driven by market sentiment.

One of the benefits of the LIC structure is that the Company, unlike in an unlisted managed fund, does not have to sell holdings to fund redemptions. Zenith believes this feature is a key competitive advantage for the Company given its bias toward small/micro cap stocks. That is, the Company will not have to sell positions at inopportune times to meet redemption requests.

Although the Company has a strong track record, investors should be aware that its market capitalisation is relatively low at approximately \$40 million (as at 30 April 2017) and as such liquidity and trading volumes are frequently thin.

## RISKS OF THE INVESTMENT

### SECTOR RISKS

Funds within the "Australian Equities/Listed Investment Company" sector are exposed to the following broad risks:

**MARKET & ECONOMIC RISK:** As is the case with all long only Australian Share funds, the biggest risk to performance is a sustained downturn across the Australian share market. In addition, changes in economic, social, technological or political conditions, as well as market sentiment could also lead to negative fund performance. This risk can be significantly reduced by investors adhering to the LIC's prescribed investment time frame.

**SPECIFIC SECURITY RISK:** This is the risk associated with an individual security. The price of shares in a company may be affected by unexpected changes in that company's operations such as changes in management or the loss of a significant customer.

**LIQUIDITY RISK:** This is the risk that a security or asset cannot be traded quickly enough, due to insufficient trading volumes in the market. When trading volumes are low, sellers can significantly impact the price of a security when attempting to quickly exit a material position.

**STYLE BIAS RISK:** Australian equity managers will either employ a Growth, Value or Neutral (combination of Value & Growth) styled approach to investing. Each style is conducive to certain market conditions, i.e. Growth should outperform Value in an upward trending market and vice versa in a downward trending market. As with Market Risk, investors should adhere to the LIC's investment time frame to avoid short-term market movements and style impact.

**CAPACITY RISK:** High levels of funds under management (FUM) can present additional challenges to an Australian equity manager, as high FUM has the potential to hamper the manager's ability to trade efficiently and/or be forced to disclose substantial shareholdings to the market (most common in smaller companies).

### PREMIUM/DISCOUNT TO NET TANGIBLE ASSETS

**(NTA):** Investors need to be aware that as a LIC, the Company's shares will have their own trading patterns and may trade away from their Net Tangible Assets (NTA) which at times may impact the effectiveness of the Company's investment process and/or expected risk-return profile.

### FUND RISKS

Zenith has identified the following key risks associated with the Company this is not intended to highlight all possible risks:

**MANAGER RISK:** Zenith believes the success of the Company will be largely dependent on Wilson AM and the ability of the investment team to produce returns through bottom-up stock selection and sector/market positioning. Unlike many traditional funds, we believe the Company has the ability to deploy two important levers which many others do not have at their disposal: an absolute return focus (i.e. ability to hold significant cash when investment opportunities are not apparent) and not having to be concerned about fund redemptions.

**CONFLICT RISK:** Many LICs are exposed to conflict risk because there is a direct link typically between the Company and the Manager. In the case of the Company, this is present with Geoff Wilson who is the Chairman and also the sole director and "beneficial" owner of Wilson AM.

**KEY PERSON RISK:** Zenith believes Geoff Wilson, founder and 100% owner of Wilson AM, is integral to the success of the Company and the firm. Although Chris Stott is the obvious successor and highly regarded by Zenith, Wilson's departure would trigger a reassessment of our rating.

**SHORT SELLING RISK:** The Company may be engaged in short selling. Short selling involves borrowing and selling securities the Company does not own. The action of stock borrow creates an obligation to redeliver the securities borrowed (or their equivalent) on an agreed date, or if circumstances change on demand from the stock lender. Short sale positions create an unlimited risk for the portfolio, if the stock price of the security rises and the Company is unable to buy the securities back in the market place. The act of buying securities in a rising market can add to the positive price momentum and add to the losses in the Company.

**DERIVATIVES RISK:** The Company can use various derivatives including options and futures and these investment securities can be volatile, speculative, illiquid and leveraged.

## QUALITATIVE DUE DILIGENCE

### ORGANISATION

#### WAM Active Limited

MAM Pty Ltd (MAM) was engaged by the Company as the Manager via an investment management agreement (IMA) dated 6 November 2007. This agreement had an initial 10 year term with an option to repeatedly extend by a further 10 years. This option is up for expiry in 6 November 2017.

The IMA in place provides for provision whereby MAM may be terminated after the initial term (i.e. on three month notice by way of ordinary resolution, which typically requires a majority). After the initial term it became much harder to terminate MAM. In the event that Wilson AM is terminated, a 12 month fee penalty applies.

As at 30 April 2017, the Company had \$40 million in funds under management.

The Company has no paid employees.

The Board consists of the following individuals:

- Geoff Wilson, Executive Chairman, Appointed July 2007
- Chris Stott, Executive Director, Appointed August 2014
- Kate Thorley, Executive Director, Appointed July 2014
- Matthew Kidman, Non-Executive Director, Appointed July 2007
- John Abernethy, Non-Executive Director, Appointed November 2007

The composition of the Board does not comply with ASX corporate governance principles because:

- It does not have an independent majority
- The Chairman is not an independent director
- It does not have a Nomination Committee

Zenith would like to see the Company comply with all ASX corporate governance principles, however, we accept that there is the potential for lenience on the Nomination Committee requirement. Furthermore, Wilson, Stott and Thorley are paid as directors, albeit a nominal sum of \$10,000 p.a. each, which Zenith notes to be an inconsistent practice amongst most LICs.

### Wilson Asset Management

Wilson Asset Management - International (Wilson AM) is an independently owned boutique funds management organisation established in 1997 by Geoff Wilson. Wilson AM is the manager of WAM Capital Limited (WAM).

Through a separate entity in MAM Pty Ltd (MAM), three LICs are managed - WAM Research Limited (WAX), WAM Active Limited (WAA) and Wilson Leaders Limited (WLE). MAM was initially 80% owned by Wilson and 20% by Matthew Kidman. In June 2011, Wilson acquired Kidman's ownership in MAM, taking full control of the entity.

Zenith would prefer to see a single Investment Manager (i.e. Wilson AM or MAM) in place which would make for a cleaner, simpler structure. We would also prefer to see a wider distribution of equity to key individuals beyond Geoff Wilson. However, we note that Chris Stott, Kate Thorley (Chief Executive Officer & Company Secretary), Matthew Haupt and Martin Hickson own some non-voting preference shares.

Zenith is of the understanding that Wilson AM and MAM may merge into a single entity, which we believe to be logical.

In aggregate, Wilson AM and MAM managed approximately \$2 billion, as at 30 April 2017.

### INVESTMENT PERSONNEL

Name	Title	Tenure
Geoff Wilson	Chairman / Portfolio Manager	20 Yr(s)
Chris Stott	Chief Investment Officer	10 Yr(s)

The investment team of seven is led by Geoff Wilson who established Wilson Asset Management in 1997. Wilson has in excess of 30 years' experience in equity markets and in managing equity portfolios. Zenith holds Wilson in very high

regard, highlighting his impressive long-term track record.

Directly reporting to Wilson is Chris Stott, who has over 13 years investment experience. Having joined Wilson AM in December 2006, Stott assumed the role of Chief Investment Officer following Matthew Kidman's departure in 2011. Wilson and Stott co-manage WAM, WAX and WAA. Zenith believes Stott is a strong investor, which reduces the key person risk associated with Wilson.

With the launch of the Wilson Leaders Limited (WLE) in 2016, which focuses on S&P/ASX 200 companies, the team expanded progressively, with three additions over the past three years. In addition, there were some responsibility changes within the team with Matthew Haupt assuming the role of portfolio manager for WLE and John Ayoub being a dedicated resource for WLE. Although Haupt and Ayoub are dedicated resources to WLE, Zenith still expects them to be solid contributors to Wilson AM's other strategies.

Zenith views the progressive expansion of the team gives rise to additional views and skill sets. In addition, we believe that the team is sufficiently resourced to continue to add value.

### INVESTMENT OBJECTIVE AND PHILOSOPHY

The Company's investment objective is to deliver investors a rising stream of fully franked dividends, provide capital growth and preserve capital. Zenith would prefer to see the delineation of a specific outperformance target, as opposed to a descriptive, qualitative objective.

Wilson AM's overall investment philosophy is to focus on investing in growth companies with an emphasis on under researched and undervalued stocks. These companies tend to be small to mid-cap sized listed industrial companies. Wilson AM's style is best described as fundamentally driven and absolute return focused. In instances where investment opportunities cannot be found, significant levels of cash will be held.

The Company's investment strategy targets relatively short-term arbitrage and mispricings which include: participating in IPOs, placements, block trades, rights issues, takeovers, LICs trading at discounts to net tangible assets (NTA), earnings momentum surprise and market themes and trends. The portfolio is actively traded and can participate in short selling.

One of the key beliefs within Wilson AM from a top down, structural perspective is that listed investment companies (LICs) provide a distinct advantage to unlisted funds which are open ended. Given LICs manage a captured pool of assets, fund managers are not hindered by inflows and outflows, which can have a significant impact on performance. Although Zenith believes LICs have this advantage over unlisted peers, we note that the effectiveness of the strategy may be altered by the Company's own trading movements. That is, investors may not be able to benefit from the strategy's capital preservation focus as the performance of the Company is driven by market sentiment.

With the launch of the WAM Microcap LIC in mid-2017, Wilson AM put in place formal market capitalisation guidelines for each strategy it manages. That is, the Microcap LIC will focus on stocks which have a market capitalisation below \$300 million, with exclusive access to companies that are below \$150 million. Although the Company has a bias towards smaller

companies, Zenith notes that the strategy has not historically invested in companies with a market capitalisation less than \$150 million. As such, we believe the Company will not be materially affected by the launch of the Microcap LIC.

## SECURITY SELECTION

The Company attempts to take advantage of relative short-term arbitrages and mispricings in the market rather than investing in any individual companies or portfolio of companies for a prolonged period of time. This involves the detailed monitoring of both primary and secondary market activity with particular emphasis on new capital raisings and corporate activity.

Unlike the majority of its fundamentally driven peers, the Company employs a trading/short-term investment approach. For particular investments whereby the team believes there is a short-term profit apparent, no further detailed analysis may be required. In other instances, the team will conduct further analysis. This may involve employing traditional fundamental analysis techniques like meeting and having discussions with company management.

The Company is highly active and can result in a high level of turnover of trade ideas. Trade ideas stem from a range of sources, such as:

- Institutional and retail sales teams within brokers
- Company directors
- Company senior management
- Funds management community
- Wilson AM shareholder/investor base

Zenith believes it is crucial for the investment team to ensure that they foster and grow their relationships across these networks.

Once an opportunity is identified, the team will assess the risk and return characteristics of the trade. The team will also evaluate whether the trade has sufficient liquidity for successful implementation. A catalyst is needed prior to portfolio inclusion.

Zenith believes the Company's investment process is a point of differentiation relative to fundamentally driven approaches.

## PORTFOLIO CONSTRUCTION

Once a catalyst is identified, a position can be initiated. To size positions, considerations are made with regards to the overall risk/return profile of the existing portfolio

While there is no restriction on the number of positions held, there will typically be 30 to 90 positions in the portfolio. Portfolio positions will typically be initiated at a maximum of 6% and spread across multiple industry sectors and non-benchmark constituents.

The Company will hold significant levels of cash if investment opportunities cannot be found. Cash is held in the form of 30 day to 180 day term deposits with the major local banks on various staggered maturities to allow for liquidity. Cash holdings for the Company have averaged approximately 45% since inception. Although Zenith prefers actively managed funds to be fully invested, we note that the ability to hold high cash exposures is consistent with the Company's capital preservation investment objective.

The Company generally does not use leverage nor futures, however, options may be used occasionally. The option strategy that is generally employed within the Company is a collar, which involves buying a put option and selling a call option. Collars are used to limit downside, but also forgo upside potential. Option positions have always been less than 5% of the portfolio and never held without owning the underlying company.

In addition, the Company is able to short sell securities, however, the team have used this ability sparingly, with short sold positions never being more than a 10% allocation since inception. Short sold positions are subject to a 10% stop loss limit. A stop loss limit of 10% is also applied to other trades.

Positions may be sold for one of the following reasons:

- The position has fulfilled expectations
- The catalyst which triggered an investment no longer remains true
- The company is trading at or above the re-assessed fair value
- 10% stop loss limit is breached

Consistent with the short-term nature of the strategy, the Company is expected to exhibit portfolio turnover of between 200% p.a. to 400% p.a.

Overall, Zenith believes the portfolio construction approach allows for the team's best ideas to be represented in the portfolio.

## RISK MANAGEMENT

Portfolio Constraints	Description
Sector, market capitalisation constraints	Nil
Stock shorts	Never been more than 10%
Max. single stock exposure	Mo restriction but typically <20%
Max. cash	No restriction
Leverage	Nil

Consistent with the Company's flexible investment philosophy and approach, portfolio constraints are not prescriptive. Given the broader portfolio constraints, investors should note that the Company may be significantly overweight certain sectors at different points in the market cycle.

Zenith believes risk management is embedded in the investment process, with the Company seeking to understand the risk and return characteristics of each investment. In addition, we believe the requirement of a catalyst before portfolio inclusion reduces the uncertainty of an investment.

The Company has a particular emphasis on capital preservation, with the flexibility to allocate up to 100% in cash when there are a lack of investment opportunities. Zenith believes the wide cash constraint can potentially add value in overvalued equity markets and/or falling market conditions.

Zenith is satisfied that the Fund's risk management processes are embedded throughout the entire investment process and that the liquidity of holdings are adequately monitored.

However, given the Company's broad mandate, Zenith believes investors should be aware that there is a significant reliance on the team's skill and judgement in managing risks.

### Dividend Policy

The Board is committed to paying an increasing stream of fully franked dividends to shareholders provided the Company has sufficient profit reserves and franking credits and it is within prudent business practices. Dividends will be made with consideration to cash flow, cash holdings and available franking credits.

The Company has a dividend reinvestment plan (DRP) in place which operates at a 5% discount calculated on the Volume Weighted Average Price (VWAP) on the record date and the three days preceding that date.

Prior to 2015, the Company's dividend growth since inception has been robust and in-line with management's strategy. In 2015, the Company was not able to meet its dividend growth objectives and returned capital to investors. This was a result of the Company not having the required profit reserves to sustain a growing stream of distributions. Zenith would prefer a more robust dividend policy that reflects current market environments. That is, we would not like to see capital returned to investors as a result of the Company not being able to meet income objectives.

Dividends represent an annualised net yield of 4.8% as at 30 April 2017.

### INVESTMENT FEES

LICs can broadly be categorised into two groups from a management and fee standpoint on the basis of whether they are internally or externally managed (operating under an individually managed account). Typically, internally managed LICs have lower proportional management costs due to a larger asset pool. Externally managed LICs tend to have management costs more in-line with unlisted managed funds.

Wilson AM is entitled to a management cost of 1.1% p.a. inclusive of GST (1% p.a. exclusive of GST), which is calculated and paid monthly in arrears.

There is also a performance fee of 22% inclusive of GST (20% exclusive of GST) of any positive returns over the calculation period, net of fees. A high water mark is attached to the performance fee calculation, meaning that any negative relative performance is carried forward and must be recouped

prior to performance fees being paid. The Company will also reimburse Wilson AM expenses in relation to management of the portfolio or acquisition, disposal or maintenance of any investment.

While Zenith is pleased to see a high water mark in place, we note that there is no return hurdle (either market or absolute) for the performance fee. A performance hurdle is normally either a market benchmark (i.e. the All Ordinaries Accumulation Index) or the risk free rate, being cash. Furthermore, most performance fees are calculated off "net" assets so as to remove the management cost before performance fees are paid. Zenith believes that the lack of a performance fee hurdle makes the Company's fee structure highly uncompetitive and is inconsistent with industry best practice.

The Company's management cost is broadly in line with its externally managed peers.

Fee Type	LIC / Peer Group	Fee %
Management Cost	WAM Active Limited	1.10%
Sector Average - Internally managed <sup>1</sup>	Australian Equities LICs	0.30%
Sector Average - Externally managed		1.14%
Performance Fee	22% of the increase in the gross value of the portfolio.	

<sup>1</sup> Internally Managed LICs data use published Management Cost as at 28 April 2017 and are ex-GST. All other fees are inclusive of GST, not including Reduced Input Tax Credits. Source: ASX, Zenith.

Sortino Ratio - LIC	0.46	0.77	-0.05	4.09

Readers should note that unless otherwise indicated, all performance, consistency and risk/return data is referenced to the Zenith assigned benchmark (as represented by Benchmark 1 in the above table) with the LIC returns representing those attributable to shareholders (i.e. share price + dividends). For comparison purposes, Zenith has also included the net returns of the investment portfolio (as represented by Benchmark 2 in the above table) as Zenith believes this is the best measure of the investment manager's skill. However, investors should note that whilst we expect the portfolio returns to be a key driver of the share price over the longer-term, due to the LIC structure, these returns may not be able to be fully realised by shareholders at various points in time.

All commentary below is as at 30 April 2017.

The Company's investment objective is to deliver a growing

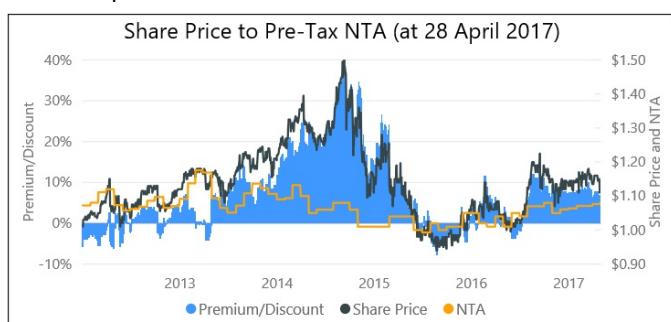

dividend income stream and preserve capital over the short and long-term. Although the Company is benchmark unaware, the Company utilises the Australian All Ordinaries Index as a performance benchmark.

The Company's portfolio has performed strongly over the long-term, outperforming the benchmark over all assessed periods.

### Share Price vs. NTA

The Company was trading at 5.6% premium to NTA as at 30 April 2017.

The following chart shows the Company's premium/discount since inception.

**WARNING: Zenith ratings applied to LICs do not explicitly take into account share prices vs. NTA and do not represent a buy/sell recommendation based on a LICs valuation. Potential investors should make their own determination of the appropriateness of prevailing premiums or discounts to NTA when acquiring or disposing of a LIC.**

All commentary below is at 30 April 2017.

Zenith seeks to identify funds that can outperform in over 50% of months in all market conditions, as we believe this represents consistency of manager skill. The Company's consistency statistics illustrate strong historical outperformance above benchmark in falling market conditions.

### DRAWDOWN ANALYSIS

Drawdown analysis assesses the relative riskiness of a Fund versus the benchmark, in reference to capital preservation. The maximum Drawdown is recorded as the percentage decline in the value of a portfolio from peak to trough (before a new peak is achieved). All Drawdown analysis is calculated commencing from the inception date of the Fund in question, and Drawdown analysis for the Fund and benchmark(s) are calculated independently. That is, the largest drawdown for the Fund and benchmark(s) will not always refer to the same time period.

Drawdown Analysis	LIC	BM1	BM2
Max Drawdown (%)	-32.84	-45.75	-58.34
Months in Max Drawdown	15	14	14
Months to Recover	5	50	-

Worst Drawdowns	LIC	Benchmark 1	Benchmark 2
1	-32.84	-45.75	-58.34
2	-28.47	-12.23	
3	-12.21	-6.89	
4	-6.19	-5.26	
5	-4.72	-3.22	

All commentary below is at 30 April 2017.

Consistent with the Company's capital preservation focus, drawdowns have been smaller than that of the benchmark. Zenith expects stronger drawdown protection during periods of significant market corrections.

Despite the relative merit of a strategy, investors should give consideration to the method of access. While the unlisted fund structure may be less convenient for some investors, accessing a strategy via a LIC will mean that the effectiveness of the strategy may be significantly diminished due to the Company's own trading movements. That is, investors may not be able to benefit from the portfolio's performance, as the performance of the Company is driven by market sentiment.

### REPORT CERTIFICATION

Date of issue: 8 Jun 2017

## DISCLAIMER AND DISCLOSURE

Zenith Investment Partners (ABN 27 103 132 672) is the holder of Australian Financial Services Licence 226872 and is authorised to provide general financial product advice. This Product Assessment Report (report) has been prepared by Zenith exclusively for Zenith clients and should not be relied on by any other person. Any advice or rating contained in this report is limited to General Advice for Wholesale clients only, based solely on the assessment of the investment merits of the financial product. This report is current as at the date of issue until it is updated, replaced or withdrawn and is subject to change at any time without notice in line with Zenith's regulatory guidelines. Zenith clients are advised to check the currency of reports and ratings via Zenith's website for updates. Any advice contained in this report has been prepared without taking into account the objectives, financial situation or needs of any specific person who may read it. It is not a specific recommendation to purchase, sell or hold the relevant product(s). Investors should seek their own independent financial advice, obtain a copy of, and consider any relevant PDS or offer document and consider the appropriateness of this advice in light of their own objectives prior to making any investment decision. Zenith charges an upfront flat fee to the Product Issuer, Fund Manager or other related party to produce research on funds that conform to Zenith's Research Methodology. Zenith's fee and Analyst remuneration are not linked to the rating outcome in any way. Views expressed in Zenith reports accurately reflect the personal, professional, reasonable opinion of the Analyst who has prepared the report. Zenith may also receive a fee for other non-research related services such as subscription fees for Zenith's research services and/or for the provision of investment consultancy services. Conflicts management arrangements are in place where Zenith provides research services to financial advisory businesses who provide financial planning services to investors and are also associated entities of the product issuers, with any such conflicts of interest disclosed within reports as appropriate. Full details regarding such arrangements are outlined in Zenith's Conflicts of Interest Policy [www.zenithpartners.com.au/ConflictsOfInterestPolicy](http://www.zenithpartners.com.au/ConflictsOfInterestPolicy)

Zenith's research process seeks to identify investment managers considered to be the 'best of breed' through a comprehensive, multi-dimensional selection process. Zenith utilises both quantitative and qualitative factors in its ratings models. Models maximise commonality across different asset classes while retaining flexibility for specialist asset classes and strategies. The selection process is rigorous in both its qualitative and quantitative analysis and each component is equally weighted. Zenith does not manage any proprietary assets and as such Zenith is able to choose investment managers with absolute independence and objectivity.
